

DECIMALS

LO: To divide a 2-digit number by 10.

What I think

My teacher thinks

I can remember to:

Write the number on a place value chart

☐

Move the number one place to the **right** to make the number **ten times smaller**

Write the number now it has been moved (remember to include the decimal point if it has one)

☐

DO ME FIRST

b) Here is a pile of coins. Estimate the amount of money.

HINT: An estimate is a close guess.
