

Here is Whitney's working out.

$$\begin{array}{rcl} + 5 & \swarrow & 5 \text{ miles} \approx 8 \text{ km} \\ & & \searrow \\ & & 10 \text{ miles} \approx 13 \text{ km} \end{array} \quad \begin{array}{l} \swarrow \\ \searrow \end{array} + 5$$

Explain Whitney's mistake.

4a. Eesa has planned his run on a map.

Approximately, how far is his run in km?

PS

5a. Millie says,

Is she correct? Explain your answer.

R

6a. Ivy is planning a road trip.

She wants to arrive in Paris, which is 500 miles from her starting point, by day 4.

She has travelled 640km by day 3.

Approximately, how many miles does she have left?
